Comprehension Passage:

Read the passage given below and then answer the five questions that follow it by choosing the best option:

Even now, well into the second decade of the 21st century, we tend to view video game as a guilty pleasure. For anyone over the age of 25, they're often something you sneak off to do when no one is at home. They're a secretive indulgence, filled with the cultural equivalent of empty calories.

Partly this is to do with how video games have been marketed for the last 30 years – mostly at teenage boys. The game industry has taught us to see games as loud, rude, and mysterious. On top of this, the most visible titles tend to conform to familiar stereotypes: *Call of Duty* is about killing enemies; *Candor Crush Saga* is about killing time. Because teenagers bury themselves in these games, they don't see how these corporate entities creep into their thinking and personality.

But, the last five years has seen a huge rebirth in video game design. The democratisation of the medium – through cheap development tools and the rise of super-fast broadband – has brought in new voices and ideas. Fascinating things are happening.

In a lot of important ways, almost all games can be shared. Couples can bond better when they sit down and play adventure game together, taking turns with the controls, helping each other, discussing tactics and options. Playing video game with your kid, in a domain they enjoy and feel comfortable, is a joyous experience. It lets them take the lead; it lets them show you stuff. The skills are also transferable and can expand into the real world. Watching our friends through play reveal hidden aspects of their personality and character. Incidentally, games can offer practice in talking to machines.
