Comprehension:

Read the following information carefully and answer the given questions.

Theatre had its origins in the earliest parts of human history. Before there were actual theatres and actors, the first form of theatre can be found in the development of dance culture. Dances were originally performed in commemoration of major events, celebrations and religious ceremonies. At first, they were very informal affairs with little practice, but dancing as rituals evolved into very sophisticated forms of artistry by the 3000B BCE era. The theme of religion that first originated in ritualistic dancing continued in theatre for more than four thousand years. Modern theatre has changed a lot since the time of traditional Greek Tragedies and Roman Theatrics. Today's theatre has many contrasting and diverse styles; it contains both higher levels of musical and acting talent. Greek theatre is where modern theatre draws its roots from. It is the start of the Western tradition of theatre because not only did the Greeks enjoy theatre as part of religion, but also saw it as an art form. The first steps towards Greek theatre occurred when dances and rituals to the ancient Greek God of Wine, Dionysus, became more sophisticated. The biggest change was the addition of style and theme that led to the development of plays, where spoken word was used rather than only song and dance. Formal Greek theatre is renowned for its style, themes and physical constructions. The great Greek playwrights were very interested in the development of a theme in their plays. Following Greek theatre, the next evolution of theatre occurred during the Roman era. Roman theatre was not extremely original because it took many of the elements of Greek theatre. Many Roman plays were adaptations or even direct copies of Greek plays but the biggest difference between the two is that Romans made theatre much more secular.

Question ID : 54592780071

Comprehension:

Read the following information carefully and answer the given questions.

Theatre had its origins in the earliest parts of human history. Before there were actual theatres and actors, the first form of theatre can be found in the development of dance culture. Dances were originally performed in commemoration of major events, celebrations and religious ceremonies. At first, they were very informal affairs with little practice, but dancing as rituals evolved into very sophisticated forms of artistry by the 3000B BCE era. The theme of religion that first originated in ritualistic dancing continued in theatre for more than four thousand years. Modern theatre has changed a lot since the time of traditional Greek Tragedies and Roman Theatrics. Today's theatre has many contrasting and diverse styles; it contains both higher levels of musical and acting talent. Greek theatre is where modern theatre draws its roots from. It is the start of the Western tradition of theatre because not only did the Greeks enjoy theatre as part of religion, but also saw it as an art form. The first steps towards Greek theatre occurred when dances and rituals to the ancient Greek God of Wine, Dionysus, became more sophisticated. The biggest change was the addition of style and theme that led to the development of plays, where spoken word was used rather than only song and dance. Formal Greek theatre is renowned for its style, themes and physical constructions. The great Greek playwrights were very interested in the development of a theme in their plays. Following Greek theatre, the next evolution of theatre occurred during the

Roman era. Roman theatre was not extremely original because it took many of the elements of Greek theatre. Many Roman plays were adaptations or even direct copies of Greek plays but the biggest difference between the two is that Romans made theatre much more secular.
