17.	The variety of cast iron which ha (a) Gray iron(c) Ductile iron	s maximum (b) (d)	hardness is Malleable iron White iron		
18.	The Kutzback criterion for determechanism with L as number of higher pairs is				
	(a) $3(J-1) - 2L - H$	(b)	2(L-1) - 2J - H		
	(c) $3(L-1) - 2J - H$	(d)	2(L-1) - 3J - H		
19.	The crystal structure of cementit (a) FCC (b) BCC	e is (c)	Tetragonal (d) Orthorhombic	
20.	Hardness will be highest after w	hich of the fo	llowing heat trea	tment process?	
20.	(a) Furnace cooling	(b)	Air cooling	tillent process.	
	. ,				
	(c) Oil quenching	(d)	Water quenchin	S	
21.	In which of the following type of (a) Compound gear train (c) Reverted gear train	(b)	he first gear and l Simple gear trai None of these	_	
22.	For heat transfer across a comconductivity, study the following I. Temperature is continuous II. Temperature gradient is no III. Heat flow is not continuous	statements. always. t continuous		aving different therma	l
	(a) Statement I alone is correct (c) Statement II alone is correct	, ,	Statement I and All the statemen		
23.	Which of the following treatment	does not im	prove hardness?		
•	(a) Quenching (b) Cyanid		Normalising (d) Annealing	
24.	The ratio of the height of a por	ter governor	(when the lengt	h of arms and links are	Э

equal) to the height of watt governor is: (*m*: mass of the ball; *M*: mass of the sleeve)

(a)
$$\frac{m}{m+M}$$
 (b)

(b)
$$\frac{M}{m+M}$$

(c)
$$\frac{m+M}{m}$$

(d)
$$\frac{m+M}{M}$$

SET A

Recruitment Entrance Test for Scientist/ Engineer 'SC' 2017

- **25.** For a specified inlet and outlet temperatures, for which kind of heat exchanger will the log mean temperature difference, ΔT_{lm} will be highest?
 - (a) Double pipe parallel flow heat exchanger
 - (b) Double pipe counter flow heat exchanger
 - (c) Cross flow heat exchanger
 - (d) Multi pass shell and tube heat exchanger
- **26.** Fatigue strength for non-ferrous materials is usually defined at stress cycles.
 - (a) 10^4
- (b) 10^7
- (c) 10^9
- (d) 10^{12}

- **27.** If $A = \begin{pmatrix} 9 & 6 \\ 8 & 7 \end{pmatrix}$ then det $(A^{99} A^{98})$ is
 - (a) 1
- (b) 48
- (c) (
- (d) 2⁹⁹

- **28.** $\lim_{\theta \to \pi/2} \frac{\log(\theta \pi/2)}{\tan \theta}$ is
 - (a) 1
- (b) $\pi/2$
- (c) $\pi/4$
- (d) (

- **29.** The solution of ODE y dx + x dy = 0 is
 - (a) $y = \frac{k}{x}$
- (b) $y = \frac{k}{v x}$
- (c) $y = \frac{x}{y}$
- (d) $y = e^{kx}$
- **30.** If φ is a scalar point function, the value of curl Grad φ is
 - (a) 0
- (b) 1
- (c) 2
- (d) 3
- **31.** The point where the plane x + 3y + 2z 6 = 0 meets the line joining P(2, 1, 1) and Q(1, 3, -2) is,
 - (a) (2, 1, 1)
- (b) (1, 1, 1)
- (c) (1, 3, -2)
- (d) (-1, 3, 2)

- **32.** $\int_{0}^{\pi/2} \sin^{7} x \ dx \text{ is}$
 - (a) $\frac{8}{35}$
- (b) $\frac{16}{35}$
- (c) 0
- (d) 1

SET

Recruitment Entrance Test for Scientist/ Engineer 'SC' 2017

33. Laplace transform of $t \cos(at)$ is

(a)
$$\frac{s^2 + a^2}{(s^2 - a^2)^2}$$

(b)
$$\frac{s}{(s^2 - a^2)^{\frac{2}{3}}}$$

$$\frac{s^2 + a^2}{(s^2 - a^2)^2}$$
 (b) $\frac{s}{(s^2 - a^2)^2}$ (c) $\frac{s^2 - a^2}{(s^2 + a^2)^2}$ (d) $\frac{s}{(s^2 + a^2)^2}$

(d)
$$\frac{s}{(s^2 + a^2)^2}$$

34. If two vectors $\vec{a} = 3i + 4j - 7k$ and $\vec{b} = Pi - 6j + 3k$ are perpendicular, the value of P

- (a) 1
- (b) 0
- (c) 12
- (d) 15

The arithmetic mean of 12 data point is 79. Later it was found that two data points were wrongly taken as 83 and 68 in place of 78 and 97. The actual mean is

- (a) 79
- (b) 75
- (c) 81
- (d)

36. How does cetane number varies with octane number in fuels in IC engines?

(a) No relation

- (b) Directly proportional
- (c) Inversely proportional
- (d) Both are equal

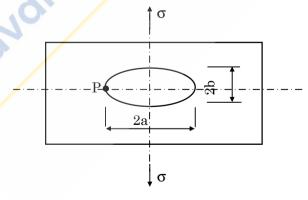

The relationship of the shear angle $\phi = \frac{\pi}{4} - \beta + \frac{\alpha}{2}$ is as per ('\alpha' is rake angle and '\beta') is friction angle)

- (a) Ernst-Merchant theory
- (b) Merchant's theory

Stabler theory

Lee and Shaffer theory

For a plate with an elliptical hole subjected to tensile stress, σ as shown in the figure, the maximum tensile stress at point P is

- (b) 2σ
- (c) 3σ
- (d) more than 3σ

39. A centrifugal compressor is suitable for which of the following?

SET A

Recruitment Entrance Test for Scientist/ Engineer 'SC' 2017

- (a) High pressure ratio, low mass flow (b) Low pressure ratio, low mass flow
- (c) High pressure ratio, high mass flow (d) Low pressure ratio, high mass flow
- **40.** The optimum cutting speed for maximum production is ('n' is tool constant and 'Tc' is time required to change the tool)

(a)
$$\frac{k}{\left[\begin{array}{c} \left\{\frac{1}{n}+1\right\} Tc\right]^{\frac{n}{2}}}$$

(b)
$$\frac{k}{\left\lceil \left\{ \frac{1}{n} - 1 \right\} Tc \right\rceil^n}$$

(c)
$$\frac{k}{\left[\left\{1-\frac{1}{n}\right\}Tc\right]^{2n}}$$

(d)
$$\frac{k}{\left[\frac{1}{n}-1\right]\frac{Tc}{2}\right]^n}$$

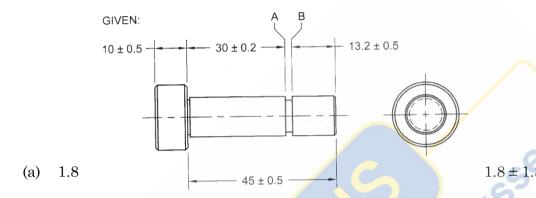

- 41. A rod of length L and area of cross section A has a modulus of elasticity E and coefficient of thermal expansion α . One end of the rod is fixed and other end is free. If the temperature of the rod is increased by ΔT , then
 - (a) Stress developed in the rod is $E \alpha \Delta T$ and strain developed in the rod is $\alpha \Delta T$
 - (b) Stress developed in the rod is zero and strain developed in the rod is $-\alpha \Delta T$
 - (c) Stress developed in the rod is zero and strain developed in the rod is $\alpha \Delta T$
 - (d) Stress developed in the rod is $\mathbf{E}\alpha\Delta \mathbf{T}$ and strain developed in the rod is zero
- **42.** The entropy of a hot baked potato decreases as it cools.
 - (a) The above statement is correct
 - (b) The above statement is incorrect as it violates the increase in entropy principle
 - (c) Too less information to comment
 - (d) The above statement is incorrect as it violates second law of thermodynamics
- 43. During January, at a location in Rohtang, winds at -6°C can be observed. Several meters below the ground, the temperature remains at 27°C. A scientist claims to have devised a power cycle exploiting this situation that has a thermal efficiency of 10%. Whether the claim is true?
 - (a) True
- (b) False
- (c) Can't say
- (d) Insufficient data
- 44. The side relief angle in a cutting tool signature of 10, 20, 7, 6, 8, 15, 2 is
 - (a) 10
- (b) 7
- (c) 6
- (d) 8

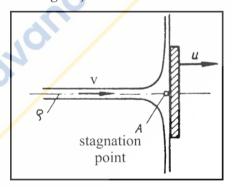

Recruitment Entrance Test for Scientist/ Engineer 'SC' 2017

SET A

45. The missing distance between A and B in the pin figure shown below is

- **46.** In an ideal gas turbine cycle with intercooling, reheating and regeneration as the number of compression and expansion states are increased, which of the following statements are correct?
 - I. The Brayton cycle reduces to Ericsson cycle.
 - II. The Brayton cycle reduces to Stirling cycle.
 - III. The cycle efficiency becomes equal to Carnot cycle efficiency.
 - (a) Statement I alone
- (b) Statement III alone
- (c) Statement I and II
- (d) Statement II and III
- 47. Calculate the dynamic head $(P_A P_{static})$ when a jet of water with a velocity, v strikes a flat plate moving with a velocity, u in the same direction as jet. (Take u = 4 m/s, v = 10 m/s and ρ = 1000 kg/m³)

- (a) 8000 Pa
- (b) 50000 Pa
- (c) 18000 Pa
- (d) 98000 Pa
- 48. The method of development of a right regular prism is
 - (a) Parallel line method
- (b) Radial line method

Recruitment Entrance Test for Scientist/ Engineer 'SC' 2017

SET A

(c)) Triangulation method	(d)

49 .	A light plane flies at 720 km/hr in standard air at an altitude of 1000) m.	Determi	ne
	the stagnation pressure at the leading edge of the wing. Take, Pair = 9	9.0 >	< 10 ⁴ N/r	n^2 ,
	$\rho = 1.1 \text{ kg/m}^3$			

(a) 90 kPa

(b) 119 kPa

(c) 112 kPa

(d) 100 kPa

50. Below the ductile to brittle transition temperature, weld joints show

(a) High ductility

(b) High toughness

Approximate method

(c) Low toughness

(d) Ductile fracture

51. What is the Prandtl number for a gas at 27° C and 1×10^{5} Pa, with kinematic viscosity equal to 1.8×10^{-5} m²/s, specific heat capacity at constant pressure = 700 J/kg-K and thermal conductivity of 0.02 W/m-K? (Take Gas constant = 300 J/kg-K)

(a) 0.52

(b) 0.62

(c) 0.70

(d) 0.78

52. In continuous casting process, the mould is generally made of

(a) Cast iron

(b) Bronze

(c) Copper

(d) Tungsten carbide

53. A re-entry module flies with Mach 10 at an ambient temperature of -27° C with $C_P = 840$ J/kg-K, gas constant R = 140 J/kg-K. What is the stagnation temperature at the tip of the nose of the re-entry module?

(a) -23°C

(b) 1377°C

(c) 2477°C

(d) -253°C

54. Which one of the following steels contains least percentage of carbon?

(a) Mild steel

(b) Stainless steel 304L

(c) Stainless steel 316L

(d) IF steel

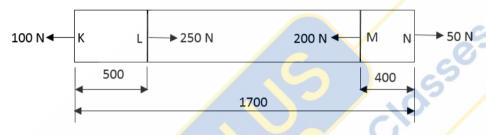

55. The Lewis number which is a measure of relative thermal and concentration boundary layer thicknesses is defined as, (Re: Reynold's number, Pr: Prandtl number, Sc: Schmidt number)

SET A

Recruitment Entrance Test for Scientist/ Engineer 'SC' 2017

- (a) $Re \times Pr$
- (b) Sc/Pr
- (c) Re/Sc
- (d) $Sc \times Pr$
- **56.** The figure shows an Aluminium rod of 25 mm² cross sectional area. It is loaded at four points, K, L, M and N. Assume E = 67 GPa for Aluminium. The total change in length of the rod due to loading as shown is close to

All dimensions are in mm

(a) $30 \,\mu\,\text{m}$

(b) $-10 \, \mu \text{m}$

(c) $-30 \,\mu \text{m}$

- (d) 10 μm
- **57.** The basis of slip line field theory in metal cutting is
 - (a) Merchant theory

- (b) Lee and Shaffer theory
- (c) Ernst-Merchant theory
- (d) None of these
- 58. A room contains 25 kg. of air at 100 kPa and 14°C. The room has a 250 W refrigerator and 1 kW electric resistance heater. During a cold winter day, it is observed that both the refrigerator and the heater are running continuously, but the air temperature in the room remains constant. The rate of heat loss from the room during that day is
 - (a) 3600 kJ/hr.

(b) 1250 kJ/hr.

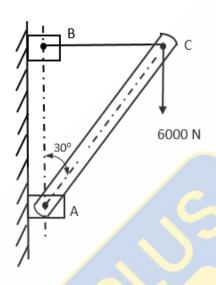

(c) 4500 kJ/hr.

- (d) 2700 kJ/hr.
- **59.** The bar AC, 10m long supports a load of 6000 N as shown in figure. The cable BC is horizontal and 5m long. Forces in the cable and the bar are

Recruitment Entrance Test for Scientist/ Engineer 'SC' 2017

SET A

- (a) 6928 N and 3464 N
- (c) 3464 N and 3464 N
- (b) 3464 N and 6928 N
- (d) 6928 N and 6928 N
- **60.** In a grinding wheel specification of 'wa36k8vbe', "wa" indicates
 - (a) Grain size

(b) Type of grade

(c) Type of abrasive

- (d) Type of structure
- 61. Two Carnot heat engines are operating in series such that the heat sink of the first engine serves as the heat source of the second one. If the source temperature of the first engine is 1327°C, the sink temperature of the second engine is 127°C, and the thermal efficiency of both the engines are the same, the temperature of the intermediate reservoir is:
 - (a) 627°C

(b) 410°C

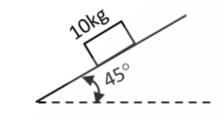

(c) 577°C

- (d) 527°C
- **62.** A body of mass 10 kg is initially stationary on a 45° inclined plane as shown in figure. The coefficient of dynamic friction between the body and the plane is 0.3. The body slides down the plane and attains a velocity of 20 m/s. The distance travelled (in metre) by the body along the plane is close to

Recruitment Entrance Test for Scientist/ Engineer 'SC' 2017

SET A

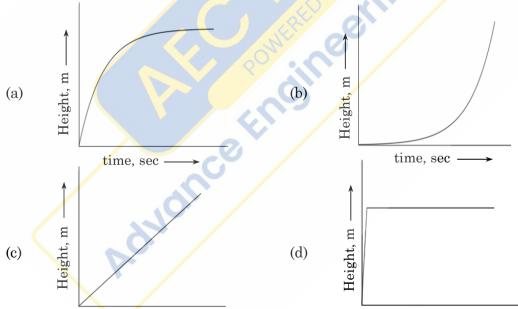

(a) 4.8

- (d) 9.8
- 63. In metal forming, ring compression test is carried out to find out
 - (a) Compressive strength
- (b) Interface friction

(c) Upset ratio

- (d) None of these
- **64.** Water flows into the top of an open drum at a constant mass flow rate. Water exits through a pipe near the base with a mass flow rate proportional to the height of the liquid. If the drum is initially empty, which of the following gives the plot of liquid height with time?

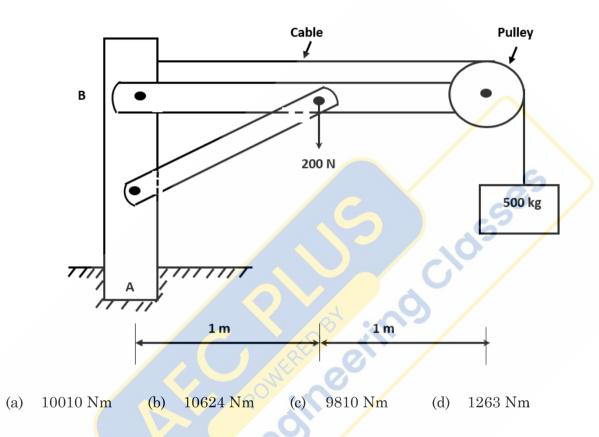

65. What is the approximate reaction moment at the fixed supported for the loaded frame shown below? (Take the diameter of the pulley as 250 mm)

Recruitment Entrance Test for Scientist/ Engineer 'SC' 2017

SET A

66. A radiator on a space capsule must dissipate heat generated inside the capsule, by radiating it into space. While on the bright side of earth, the capsule sees the earth's radiation and the solar radiation. The radiator surface has a solar absorptivity of 0.5 and an emissivity of 0.9. What is the maximum equilibrium surface temperature of the radiator, if the maximum heat generated in the capsule is 800 W/m²?

Assume earth's radiation = 100 W/m^2 and solar irradiation = 524 W/m^2 .

Take Stefan Boltzmann constant as 5×10^{-8} W/m²-K⁴

- (a) 400°C
- (b) 100°C
- (c) 127°C
- (d) 160°C

- **67.** For profile controls, datum is
 - (a) Allowed but not required
- (b) Not allowed

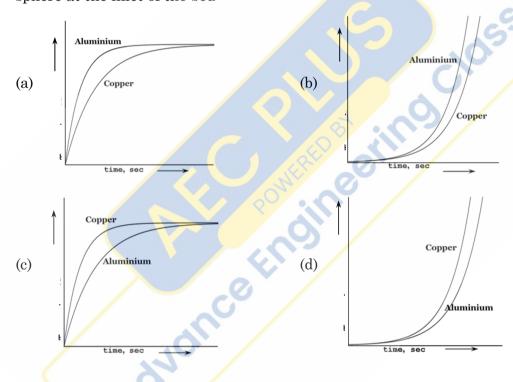

(c) Required

- (d) None of these
- **68.** A simply supported beam of length L is subjected to a varying distributed load $\sin(\pi x/L) N/m$, where distance x is measured from the left support. The magnitude of the vertical reaction in N at the left support is

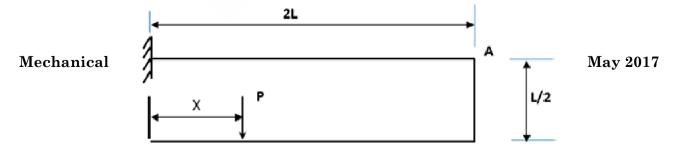

Recruitment Entrance Test for Scientist/ Engineer 'SC' 2017

- (a) $3L/\pi$
- (b) $2L/\pi$
- (c) $L/2\pi$
- (d) L/π
- **69.** A packed bed of solid spheres acts as a thermal energy storage system. In a charging process, heat transfer from the hot gas increases thermal energy stored within the spheres. Consider two beds, one with aluminium spheres ($\rho = 2700 \text{ kg/m}^3$, C = 950 J/kg-K, k = 240 W/m-K) and other with copper spheres ($\rho = 8900 \text{ kg/m}^3$, C = 400 J/kg-K, k = 380 W/m-K). Select the correct graph for the temperature rise of a sphere at the inlet of the bed

- 70. Compressive residual stresses in weld joints
 - (a) Decreases tensile strength
- (b) Increases cracking tendency
- (c) Increases fatigue strength
- (d) Coarsen the grain structure
- 71. A force P is applied at a distance 'X' from the end of the beam as shown in the figure. What would be value of 'X' so that the displacement at 'A' is equal to zero?

- (c) 0.33 L
- (d) 0.66 L
- 72. An electric heater is sandwiched between two plates each 0.3 m long and 0.1 m wide with a thickness of 30 mm. At steady state condition the heater is maintained at a temperature of 100°C, with a current of 0.25 A and voltage of 200 V. Assume the plates are perfectly insulated at the edges, and the heater is having perfect contact with the plates to give a temperature of 50°C on the outside of the plate surface. What is the thermal conductivity of the plate material?
 - (a) 1.0 W/m-K

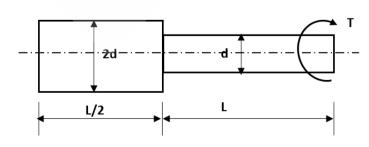

(b) 0.5 W/m-K

(c) 0.015 W/m-K

- (d) 0.3 W/m-K
- 73. Knife line or hairline cracking is observed in
 - (a) Ferritic stainless steel
- (b) Martensitic stainless steel
- (c) Austenitic stainless steel
- (d) Stabilised stainless steel
- 74. Riser is designed so as to

Mechanical

- (a) Freeze after the casting freezes
- (b) Freeze before the casting freezes
- (c) Freeze at the same time as the casting
- (d) Minimise the time of pouring
- 75. A torque T is applied at the free end of a stepped rod of circular cross-sections as shown in the figure. The shear modulus of the material of the rod is G. The expression for diameter 'd' to produce an angular twist θ at the free end is

(d)
$$\left(\frac{24TL}{\pi\theta G}\right)^{1/4}$$

76. A pin jointed uniform rigid rod of weight 981 N and length 1 m is kept horizontally by an external force F as shown in the figure below. The force F is removed suddenly. At the instant of force removal, the magnitude of vertical reaction (in N) developed at the support is close to

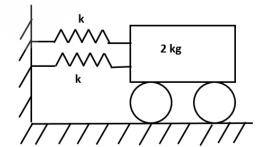

- 77. The frictional torque transmitted in a conical pivot bearing considering uniform pressure is: (R: radius of shaft, α : semi angle of cone, μ : Coefficient of friction, W: load on bearing)
 - (a) $(1/2) \mu WR \operatorname{Cosec} \alpha$

(b) $(3/4) \mu WR \cos \alpha$

(c) $(2/3) \mu WR \cos \alpha$

- (d) $(2/3) \mu WR \operatorname{Cosec} \alpha$
- 78. A mass of 2 kg is attached to two identical springs each with stiffness k = 40 kN/m as shown in the figure. Under frictionless condition, the natural frequency of the system in Hz is close to

Mechanical

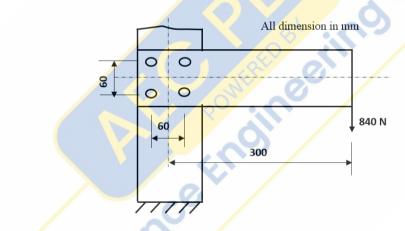

May 2017

Recruitment Entrance Test for Scientist/ Engineer 'SC' 2017

- (a) 32
- (c) 24

- (b) 16
- (d) 200
- 79. A rectangular steel plate is joined to a vertical post using four identical rivets arranged as shown below in the figure. The shear load on the worst loaded rivet (in N) approximately is

- (a) 1700
- (c) 1650

- (b) 1500
- (d) 1750

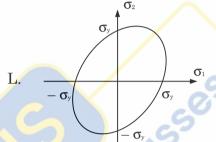

SET A

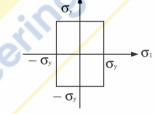

Recruitment Entrance Test for Scientist/ Engineer 'SC' 2017

80. Match the following criterion of material failure under biaxial stresses σ_1 and σ_2 and yield stress σ_y , with their corresponding graphic representations.

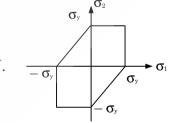

A. Maximum shear stress criterion

B. Maximum distortion energy criterion

C. Maximum normal stress criterion

- (a) A L, B N, C M
- (b) A N, B L, C M
- (c) A M, B N, C L
- (d) A N, B M, C L
